

FAQS

- Q** Will the unit work when there is no sunshine?
- A** The unit will only reflect if the sun is shining.
- Q** Do birds become familiar with the device after a while?
- A** As long as the flashes are visible, birds will not get used to the device. This is because the most sensitive part of the bird is their eyes. They will look for blind spots where the flashes are not visible.
- Q** How long will the unit be effective?
- A** The BadBirdy needs to be cleaned once every 4 months to ensure maximum effectiveness. The unit does come with a 3 year warranty (Ts and Cs apply).
- Q** Will the BadBirdy scare away all birds?
- A** No. There are many birds that can be very stubborn and refuse to move from their nesting spots. We focus on reducing bird infestations. If you want to completely get rid of birds you will need to make use of a combination of bird control products.
- Q** How effective is the BadBirdy?
- A** On average the BadBirdy will get rid of between 60 – 70% of birds within a 3 – 4 meter radius.

CLEANING PROCESS

1. Remove BadBirdy from turbine roof ventilator.
2. Wash unit with any flat surface cleaner soap.
3. After unit has been thoroughly cleaned, apply car polish with a cloth for extra shine and protection.
4. Repeat process every 4 months for maximum effectiveness.

- BadBirdy will not completely eliminate bird infestations.
- BadBirdy will deter between 60 and 70% of pest birds.
- BadBirdy will not be effective if it is not installed in direct sunlight.
- BadBirdy will not deter roosting birds as they do not nest close to sunlight.
- BadBirdy will not deter nesting birds (they will protect their younglings at all costs).
- BadBirdy will not deter large colonies of gull birds which are already settled.

WHAT IS BADBIRDY TRV?

The **BadBirdy TRV** is designed to fit on top of a turbine ventilator. The inconsistent rotating action of the roof turbine ventilator and the unique "stealth-like" design of the **BadBirdy TRV** causes reflection of sunlight at various angles and speeds. This action irritates birds in close range, resulting in scaring off unwanted birds effectively.

WHAT IS BADBIRDY SR?

"COMING SOON"

The **BadBirdy SR** is a pest bird control device that rotates with the help of wind. It is designed to scare off birds in close proximity. The **BadBirdy SR** is designed to fit in a residential environment. The shape of the **BadBirdy SR** catches all angles of the sun and affects the most sensitive part of the bird (its eyes).
