

CHIMNEY CHAMP

CHIMNEY VENTILATOR FOR FIRE PLACES

VISIT OUR WEBSITE

Available in Stainless Steel or Grey

The **Windmaster Chimney Champ** Ventilator is South African manufactured and designed to **extract smoke from braai areas and fireplaces**. The unique and patent pending bearing system of the Chimney Champ has been tested to **extract smoke of a temperature up to 300 °C**.

Wind creates down-draught, which results in unwanted smoke clouds, destroying living comforts. Installation of Chimney Champ will change these circumstances.

Ventilator rotates extensively when heat is generated and creates exhaust action, which results in a clear, hot and pleasant fire.

BENEFITS & FEATURES:

Benefits of the Chimney Champ Ventilation

- Available in Stainless Steel on Request
- Extracts irritable smoke and odours
- Prevents down-draughts and rain entering the chimney.
- Creates quick and efficient heat by drawing the fire.
- Ensures a smokeless fireplace

Chimney Champs are suitable for

- Built-in Braai Areas
- Built-in Fire Places
- Chimney's of Jetmaster or similar products.

CONCEPT & CONSTRUCTION

CONCEPT OF CHIMNEY VENTILATOR

The Chimney Champ is actuated by convection (upwards pressure of rising heat through the chimney) and is assisted by the wind to extract. The rotating dome of the Champ creates a positive reaction which extracts unwanted and irritable smoke through the chimney of braai areas and fireplaces. This reaction also causes the Chimney Champ to draw the fire, which creates quick and efficient smokeless heat.

CONSTRUCTION

Constructed of 0.6mm Chromadek material, over and above its aesthetic attributes, chromadek paint coatings are designed to provide superior corrosion protection under conditions where the performance of unpainted galvanised sheeting may prove inadequate. Paired with a specially patented heat resistant bearing assembly to withstand heat of up to 300°C.

SIZE & DIMENSIONS		
SPECIFICATION	300mm	350mm
CHARCOAL GREY		
WEIGHT	7.4kg	8.2kg
STAINLESS STEEL		
WEIGHT	6.6kg	7.2kg
